

# Family Aquatic Center

## HVAC UNIT PROJECT UPDATES

---

- In February, 2023, the Park District Board of Commissioners approved a bid for the replacement of the Family Aquatic Center HVAC unit, and a contract for the installation of a custom-built rooftop unit was approved.
- Preliminary electrical and plumbing work was completed during the annual maintenance shutdown in August of 2023.
- While project completion was expected to take between 8 and 10 months, a significant delay in manufacturing has required the targeted installation timeframe to shift. Installation dates are now anticipated to occur in August, 2024, to coincide with the annual maintenance shutdown and minimize the impact to customers.
- The Family Aquatic Center HVAC unit will resume running strictly overnight in the spring as soon as daytime temperatures begin reaching highs in the 70s/80s. Once the temperatures steady during the summer months, the Family Aquatic Center will shut the unit down until the installation of the new unit is complete.
